ONE-PAGER · LINK REIT · MALL LOYALTY PLATFORM

How Link REIT evolved Park & Dine into a connected mall loyalty platform.

Link Up brings together membership, customer engagement, promotions and relevant operational integrations for Link REIT's Hong Kong property portfolio.

THE MALL PROBLEM, AT LINK'S SCALE

Three barriers to a connected shopper experience.

01

No daily reason to open the app

The previous app mainly showed points and basic information, leaving Link with limited visibility into who shoppers were and what they cared about.

02

Thousands of tenants, few ways to reach members

More than 10,000 merchants, including many small businesses, needed a simple way to put offers in front of the right shoppers.

03

Campaigns had to run across 100+ malls

Promotions, parking and merchant data sat in separate legacy systems, making portfolio-wide campaigns difficult to launch quickly and reliably.

HOW ONE WORKS FOR LINK

Give shoppers, tenants and programme teams one connected foundation.

01

Make engagement useful — and measurable

Live parking information, Octopus card linking and in-app payment create everyday utility. Member profiles can support more relevant offers, such as lunch deals and family events.

02

Make participation practical for tenants

A merchant dashboard lets participating tenants manage offers. Members browse by mall and claim e-coupons for immediate use, helping both chains and smaller businesses take part.

03

Run flexible campaigns across the portfolio

Stamp cards, individual and team missions, Interest Club and Hub modules support campaigns across every mall or selected locations, categories and brands.

Connected foundation
The app connects to parking, property-management and membership systems. Historical member records were migrated under Link's IT governance, supporting enterprise requirements around security, data protection and demand peaks.

Programme value
One connected foundation for membership, rewards, tenant participation and campaigns that can be configured by mall, merchant category or participating brand.
