CASE STUDY · LINK REIT · MALL LOYALTY PLATFORM

How Link REIT evolved Park & Dine into a connected mall loyalty platform.

Link Up brings together membership, customer engagement, promotions and relevant operational integrations for Link REIT’s Hong Kong property portfolio.

THE CHALLENGE

A growing portfolio needed more than a parking and dining app.

Link REIT set out to evolve Park & Dine from a parking and dining app into Link Up: a digital membership and loyalty platform designed to connect shoppers, tenants, promotions and customer data.

The platform needed to support different merchant operating models, from larger chains with established POS systems to smaller businesses with limited digital infrastructure. It also needed to operate across multiple locations while connecting with established property and parking systems.

THE MALL PROBLEM, AT LINK’S SCALE

Three barriers to a connected shopper experience.

01

No daily reason to open the app

The previous app mainly showed points and basic information, leaving Link with limited visibility into who shoppers were and what they cared about.

02

Thousands of tenants, few ways to reach members

More than 10,000 merchants, including many small businesses, needed a simple way to put offers in front of the right shoppers.

03

Campaigns had to run across 100+ malls

Promotions, parking and merchant data sat in separate legacy systems, making portfolio-wide campaigns difficult to launch quickly and reliably.

THE SOLUTION

Link Up: a connected membership, CRM and promotion platform.

Motherapp helped Link REIT create a foundation for membership, CRM, campaign management, rewards and tenant participation. The platform can support mall-specific, cross-mall, category-based and brand-based offers from one connected programme.

HOW ONE WORKS FOR LINK

Give shoppers, tenants and programme teams one connected foundation.

01

Give shoppers a reason to engage — and learn from it

Real-time parking became an everyday reason to open the app: live space counts, Octopus card linking and in-app payment. Member profiles can help surface more relevant offers, such as lunch deals and family events.

02

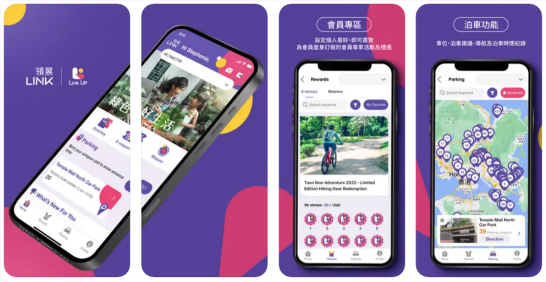

Make it simple for tenants to take part

A merchant dashboard lets participating tenants manage their own offers. Members can browse offers by mall and claim e-coupons for immediate use.

03

Run promotions across the whole portfolio

Stamp cards, individual and team missions, and configurable campaign modules such as Interest Club and Hub allow campaigns to cover every mall or selected locations.

INTEGRATION AND SCALE

Built to connect the systems that keep the portfolio running.

The app connects to Link's parking, property-management and membership systems, with historical member records migrated under Link's IT governance.

The solution supports enterprise considerations around security, data protection and periods of high demand.

A FOUNDATION FOR ENGAGEMENT

One platform for customer engagement and tenant participation.

A connected foundation for membership, rewards, tenant participation and campaigns that can be configured by mall, merchant category or participating brand.
